## List of Appendices

Appendix A – Traffic Data Collection

Appendix B – Traffic Projection Figures

Appendix C – Synchro Results for Existing Configuration

Appendix D – Traffic Signal Warrants – Summary of Justifications

Appendix E – Left Turn Lane Warrants

Appendix F – Synchro Results for Proposed Configuration

## 1.0 Introduction and Background

The City of Woodstock has retained Egis and RC Spencer Associates Inc. to conduct a study of the Juliana Drive corridor (as part of Woodstock’s new Transportation Master Plan). Woodstock is located about halfway between the two larger cities of London and Kitchener-Waterloo, on County Road 2 (Dundas Street) and Highway 401. County Road 2 is an arterial road that runs parallel to (and north of) provincial Highway 401. County Road 59 bisects the city north / south. In 2021, the population of the City of Woodstock was estimated at over 46,700, and the community continues to grow because of new area developments. The area plan is shown on **Figure 1**, and the study area is shown on **Figure 2**:

Figure 1: Area Plan

Figure 2: Study Area

The portion of Juliana Drive between Norwich Avenue and Athlone Avenue is part of the MTO's Emergency Detour Route (EDT). Additionally, the Woodstock Hospital is accessed via Juliana Drive west of Finkle Street.

In recent years, there have been several development proposals that directly impact Juliana Drive; accordingly, the City of Woodstock requested that these potential developments be evaluated in consideration of potential background growth for the area. In expectation of growth, the City recognizes that the Juliana Drive corridor may require various traffic infrastructure improvements; although this study is not an official Environmental Assessment for the Juliana Drive corridor, it is intended to proactively guide City decision-makers in sustainably evaluating their "next steps".

## 2.0 Existing Conditions

There are fifteen intersections within the subject 3.0 km study area; however, seven intersections were specifically identified by the City of Woodstock for evaluation. The intersections' current geometric and traffic control conditions are summarized as follows:

### 2.1 Mill Street at Juliana Drive

Mill Street, also known as County Road 12, is a two-lane minor arterial roadway with a dedicated southbound left turn lane and a dedicated northbound right turn lane at this location. The speed limit on Mill Street is 60 km/h. It meets Juliana Drive at a westbound stop-controlled tee intersection. Juliana Drive is a two-lane minor arterial roadway; it is comprised of an urban cross-section with a sidewalk on the south side; the speed limit on Juliana Drive is 50 km/h. Dedicated left and right turn lanes are provided on the westbound approach. A transit stop for Route 6-SW is provided on the south side of Juliana Drive approximately 90m from Mill Street.

### 2.2 Finkle Street at Juliana Drive

Finkle Street is a two-lane collector roadway that meets Juliana Drive at an all-way stop-controlled intersection. Finkle Street begins at Dundas Street and proceeds south to its terminus south of Athlone Avenue; however, there is a section between Main Street and Henry Street that allows pedestrian access only due to the CN Rail crossing. The speed limit on Finkle Street is 50 km/h. It is comprised of an urban cross-section, with a sidewalk provided on both sides of the road. Finkle Street is posted as a bicycle route (with bike lanes on both sides); sidewalks are provided on both sides. The speed limit on Juliana Drive is 50 km/h; no parking is permitted on Juliana Drive. Two transit stops for Route 7-SC are provided on the north side of Juliana Drive approximately 120m west and 20m east of Finkle Street; there is also a stop for Route 6-SW on the southwest corner of the subject intersection.

### 2.3 Athlone Avenue at Juliana Drive

Athlone Avenue is a two-lane collector roadway between Juliana Drive and Mill Street; it meets Juliana Drive at a northbound stop-controlled tee intersection. A northbound channelized right turn lane is provided. The speed limit on Athlone Avenue is 50 km/h; it is comprised of an urban cross-section, but no sidewalks are provided. Juliana Drive is a two-lane minor arterial roadway with a dedicated westbound left turn lane with a combined storage and taper length of approximately 60m, a 50 km/h speed limit and an urban cross-section; sidewalks are provided on the north side of both legs. A transit stop for Route 6-SW is on the south side of Juliana Drive approximately 90m west of Athlone Avenue.

### 2.4 Lampman Place at Juliana Drive

Lampman Place is a two-lane local roadway that meets Juliana Drive at a southbound stop-controlled tee intersection; the speed limit on Lampman Place is 50 km/h. It is comprised of an urban cross-section, with dedicated southbound left and right turn lanes; no sidewalks are provided. Juliana Drive is a two-lane minor arterial roadway with an urban cross-section; sidewalks are provided on the north side of both legs. The speed limit on Juliana Drive is 50 km/h. A transit stop for Route 6-SW is provided on the south side of Juliana Drive approximately 20m east of Lampman Place.

### 2.5 Bruin Boulevard at Juliana Drive

Bruin Boulevard is a two-lane local roadway that meets Juliana Drive at a northbound stop-controlled intersection; it is comprised of an urban cross-section with a sidewalk provided on both sides of the road. The speed limit on Bruin Boulevard is 50 km/h. Juliana Drive is a two-lane minor arterial roadway with an urban cross-section; a dedicated westbound left turn lane is provided with a combined storage and taper length of approximately 45m. Sidewalks are provided on the north side of both legs and the south side of the east leg. A transit stop for Route 6-SW is provided on the south side of Juliana Drive approximately 50m east of Bruin Boulevard.

### 2.6 Norwich Avenue at Juliana Drive

Norwich Avenue (County Road 59) at Juliana Drive is a signalized intersection with a dedicated left turn phase for all legs. Norwich Avenue (County Road 59) is an arterial road with a speed limit of 50 km/h. Juliana Drive is a minor arterial roadway which is posted at 50 km/h. These streets are comprised of an urban cross-section, with a sidewalk provided on both sides of all legs; parking and stopping are prohibited on all legs. Transit stops for Routes 5-SE and 6-SW are provided within 150m of the intersection in all directions.

The eastbound leg consists of a dedicated left turn lane (with 50m storage length and a 30m taper), a through lane and a right turn lane; the westbound leg consists of a dedicated double left turn lane

(with 63m storage length and a 70m taper), and a shared through / right turn lane. The northbound leg consists of a dedicated left turn lane (with 70m storage length and a 20m taper), a through lane and a shared through / right turn lane; the southbound consists of a dedicated left turn lane (with 38m storage length and a 15m taper), a through lane and a shared through / right turn lane.

## 2.7 Montclair Drive at Juliana Drive

Montclair Drive at Juliana Drive is a three-legged intersection with a stop control on the southbound leg; all approaches consist of shared lanes, save for the eastbound approach (which accommodates a dedicated left turn lane). Montclair Drive is a local street with an assumed speed limit of 50 km/h; this 675m long road loops around the SmartCentres Woodstock shopping mall and joins Norwich Avenue to the north. Juliana Drive is a minor arterial roadway with a speed limit of 50 km/h. There are no sidewalks provided; on-street parking is not permitted near this intersection.

## 3.0 Traffic Data Collection

As provided in **Appendix A**, on 11 October 2023, turning movement counts were obtained by Ontario Traffic Inc. for the intersections of:

- Mill Street (CR 12) at Juliana Drive;
- Finkle Street at Juliana Drive;
- Athlone Avenue at Juliana Drive;
- Lampman Place at Juliana Drive;
- Bruin Boulevard at Juliana Drive;
- Norwich Avenue (CR 59) at Juliana Drive; and
- Montclair Drive at Juliana Drive.

## 4.0 Anticipated Area Development Traffic

Within the area, there are several developments in various stages of concept, planning, or construction, and many are expected to reach full buildout within the horizon years; traffic impact studies have been prepared for some developments, so the available information was provided to RC Spencer Associates Inc. for use in evaluating the 20-year horizon traffic volumes; these development proposals are summarized in the following sections:

### 4.1 140 Ferguson Drive

The “140 Ferguson Drive Transportation Impact & Parking Justification Study” was prepared by Paradigm Transportation Solutions Limited in March 2018. The subject site is located on the west side of Ferguson Drive, south of Parkinson Road, north of Juliana Drive. The proposed development

includes 185 residential units and was expected to be constructed by 2021. Site access is provided via two roadway connections to Ferguson Drive. This subdivision will generate approximately 121 trips in the AM peak hour and 70 trips in the PM peak hour, with approximately 35% to 40% of the traffic utilizing Juliana Drive. The site plan has been approved, and the development is under construction.

#### 4.2 200 Montclair Drive

The “Proposed Commercial Development” TIS was prepared by Nextrans Consulting Engineers in December 2019. The subject site is located on vacant lands at the northwest corner of Montclair Drive at Juliana Drive. The proposed development will include a fast-food restaurant with drive-through, a walk-in bank, and shopping centre. Two site accesses are proposed onto Montclair Drive. This development will generate approximately 222 trips during the PM peak hour; the AM peak hour was not evaluated. Approximately 35% to 40% of the traffic is projected to utilize Juliana Drive. It was last noted that the site plan has been approved.

#### 4.3 300 Juliana Drive

The “Proposed Residential Development” TIS was prepared by Green Light in April 2019. The site is located on vacant lands south of Juliana Drive. The proposed development will include apartments, rental townhomes, and single-family detached / semi-detached homes; it will generate approximately 116 trips during the AM peak hour and approximately 139 trips during the PM peak hour. A primary access will be to Juliana Drive; therefore, it is assumed that a large portion of the traffic will utilize Juliana Drive. It was last noted that the site plan has been approved.

#### 4.4 335 Juliana Drive

The “Juliana Drive Apartments” TIS was prepared by HDDR Corporation in April 2022 and updated in January 2024. The subject site is located on vacant lands north of Juliana Drive at Alberta Avenue. The proposed development will include 210 apartments. This development will generate approximately 65 trips during the AM peak hour and approximately 78 trips during the PM peak hour. Main access is to be onto Alberta Avenue; however, most of the traffic is projected to utilize Juliana Drive. It was last noted that the zoning has been approved; however, the site plan has not been finalized.

#### 4.5 499 and 527 Lampman Place

The “Proposed Hotel and Conference Centre” TIS was prepared by Trans Plan Transportation Engineering in September 2019. The subject site is located on vacant lands on the northeast corner of Lampman Place at Juliana Drive. This development will generate approximately 115 trips during the AM peak hour and approximately 134 trips during the PM peak hour. Primary access will be to and from Juliana Drive via Lampman Place; therefore, it is assumed that a large portion of the traffic will

utilize Juliana Drive. It was last noted that the site plan has been approved and the development was under construction.

#### 4.6 555 Mill Street

The “Proposed Mixed-Use Phased Development” TIS was prepared by Trans Plan Transportation Engineering in March 2023. The subject site is located on Mill Street across from Clarke Road. This development which consists of two quick service restaurants with drive-through, gas station and convenience store, automatic car wash and 5-storey, 94-room hotel, will generate approximately 237 trips during the AM peak hour and approximately 285 trips during the PM peak hour. The site is just north of the Highway 401 interchange; therefore, it is assumed that a small portion of the traffic will utilize Juliana Drive, perhaps up to 11%. It was last noted that site plan approval is pending.

#### 4.7 580 Bruin Boulevard

A conceptual site plan was provided by the City of Woodstock for a residential / hotel development. Primary access will be to and from Juliana Drive via Bruin Boulevard; therefore, it is assumed that all traffic will utilize Juliana Drive. This development proposal is currently “in process”, but there is no accepted estimate of the trips generated by the subject proposal.

#### 4.8 670 Finkle Street

The “Finkle Street and Athlone Avenue Transportation Impact Study” was prepared by Paradigm Transportation Solutions Limited in October 2022. The subject site is located at the end of Finkle Street, south of Athlone Avenue, north of Highway 401. This industrial development will generate approximately 167 trips in the AM peak hour and 147 trips in the PM peak hour with approximately a third of the traffic heading north via Finkle Street or Mill Street; some of these trips may utilize Juliana Drive. It was last noted that the site plan has been approved.

#### 4.9 760 Juliana Drive

The “Proposed Re-Zoning of High-Density Residential Development” TIS was prepared by Trans Plan Transportation Engineering in April 2021. The subject site is located on the south side of Juliana Drive, across from Lampman Place. This development which consists of two high-rise residential buildings, will generate approximately 108 trips during the AM peak hour and approximately 124 trips during the PM peak hour. All site generated traffic is expected to utilize a new four-way intersection at Lampman Place. This is a City of Woodstock project where the City is seeking a zoning change.

## 4.10 763 Athlone Avenue

The “Athlone Hills” TIS was prepared by RC Spencer Associates in December 2019. The subject site is located at the southeast corner of Athlone Avenue at Juliana Drive. This mixed-use development which consists of multiple mid-rise residential buildings, a hotel, and medical and general office space, will generate approximately 400 trips during the AM peak hour and approximately 485 trips during the PM peak hour. The site will access both Juliana Drive and Athlone Avenue; therefore, it is assumed that a large portion of the traffic will utilize Juliana Drive. It was last noted that the draft plan of subdivision has been approved.

## 4.11 769 Juliana Drive

There are no existing applications for this site; however, the City of Woodstock notes that this land could be used for high density residential development.

## 4.12 Hermina / Calloway / Starbank / Berkshire Developments

The reports for these developments were provided by the City of Woodstock and are dated between 2007 and 2009. These various developments are in various stages of development. Some are fully developed; others are still vacant. There are currently no additional specifics for these properties.

## 4.13 Cedar Creek Residential Development

The “Cedar Creek, City of Woodstock, Residential Development” TIS was prepared by BA Group in November 2022. The subject site is located on the northwest corner of Juliana Drive at Lampman Place. This development which consists of a 10-storey residential building with 125 residential units, will generate approximately 45 trips during the AM peak hour and approximately 55 trips during the PM peak hour. Most site generated traffic would be utilizing the intersection of Juliana Drive at Lampman Place. Zoning has been approved, but there is no site plan yet.

## 4.14 Summary of Developments

If all area developments are compiled, the projected AM peak hour total is approximately 1374 trips, and the projected PM peak hour total is approximately 1739 trips; there are also some developments that are not yet finalized, so the estimates are not available. As noted in the descriptions of each development, not all sites are directly adjacent to Juliana Drive, and the site generated traffic from many of these sites will be diluted via other area roadways.

Currently, during the AM peak hour, there are more than 800 eastbound / westbound trips at the signalized intersection of Norwich Avenue at Juliana Drive intersection; during the PM peak hour,

there approximately 1,250 eastbound / westbound trips at this intersection. When the current volumes are grown at 3% per year, compounded annually for 20 years, the volumes are increased by approximately 80%, placing an additional 640 vehicles on-street in the AM peak hour, and an additional 1,000 vehicles on-street in the PM peak hour.

**Figure 3** depicts the locations of each of these developments in relation to Juliana Drive (as numbered in the prior development descriptions):

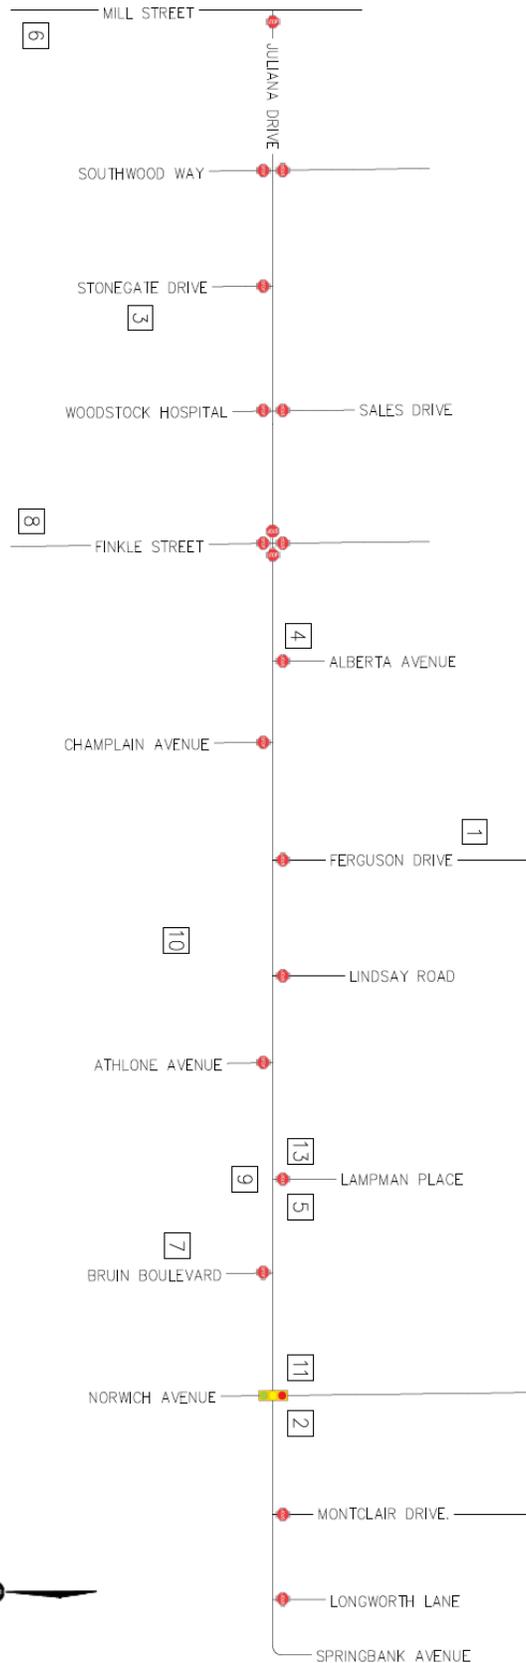

Figure 3: Anticipated Area Developments

The traffic generated by these above-noted development sites is not individually considered in the Total Traffic 2043 volumes; instead, as agreed upon with the City of Woodstock, a 3% growth rate was applied to all movements along the corridor. When compounded annually, a 3% growth rate translates to an 80.6% increase in overall traffic volumes by the 20-year horizon.

## 5.0 Methodology

The collected turning movement counts provided the basis for industry-standard traffic operations analysis; the software package utilized for the analysis (Synchro 11) calculates various parameters of intersection performance, such as level of service (LOS), intersection capacity utilization (ICU), control delay, and queue lengths. The software references the Highway Capacity Manual (6<sup>th</sup> Edition).

Signalized level of service results are based on the following:

| Level of Service | Average Control Delay (sec/veh) | General Description (Signalized Intersections)  |
|------------------|---------------------------------|---|
| A                | ≤10                             | Free Flow   |
| B                | >10 - 20                        | Stable Flow (slight delays)   |
| C                | >20 - 35                        | Stable flow (acceptable delays)   |
| D                | >35 - 55                        | Approaching unstable flow (tolerable delay, occasionally wait through more than one signal cycle before proceeding) |
| E                | >55 - 80                        | Unstable flow (intolerable delay)   |
| F                | >80                             | Forced flow (jammed)  |

Unsignalized level of service results are based on the following:

| Level of Service | Average Control Delay (sec/veh) |
|------------------|---------------------------------|
| A                | 0 - 10                          |
| B                | >10 - 15                        |
| C                | >15 - 25                        |
| D                | >25 - 35                        |
| E                | >35 - 50                        |
| F                | >50                             |

## 6.0 Capacity and Level of Service Analysis

Detailed Synchro 11 analysis was carried out with respect to the following traffic scenarios:

- Existing Traffic Volumes;
- Total Traffic 2043 (Background Traffic 2043 including Anticipated Area Development Traffic)

**Figure 4** depicts the existing traffic volumes, while **Figure 5** summarizes total background traffic estimates for the 2043 horizon year:

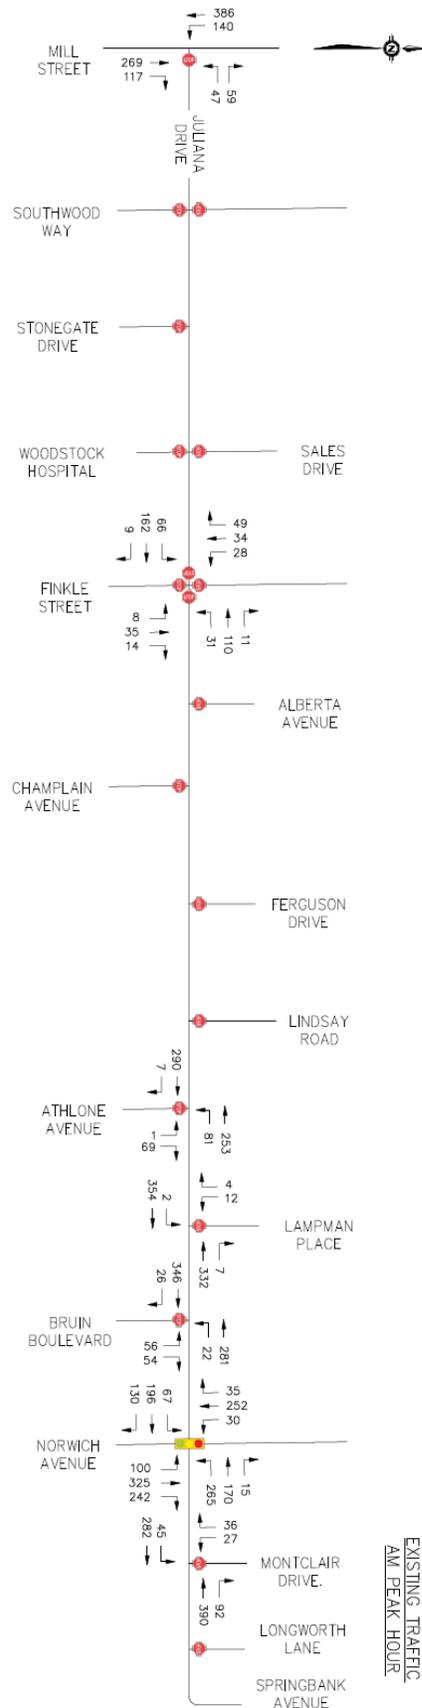

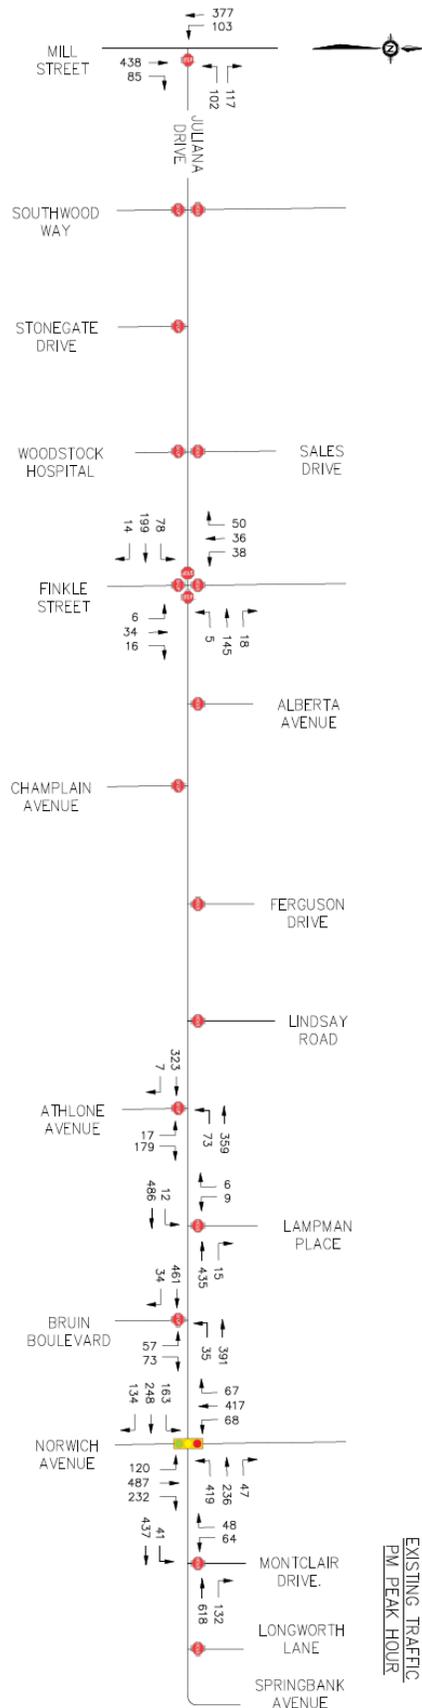

Figure 4: Existing Traffic (Weekday AM / PM Peak Hour)

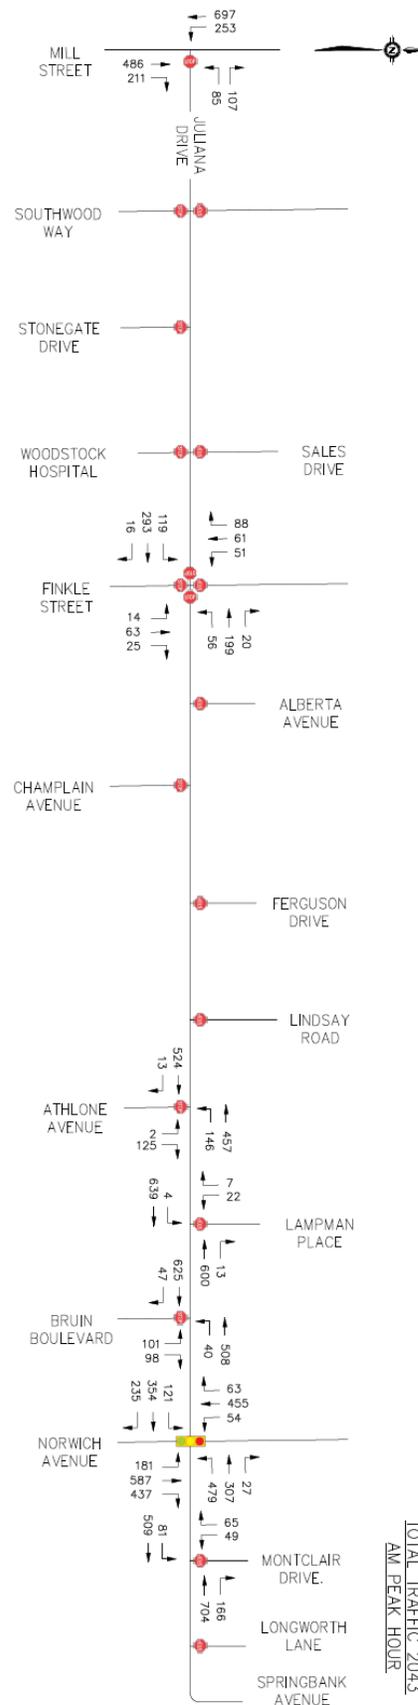

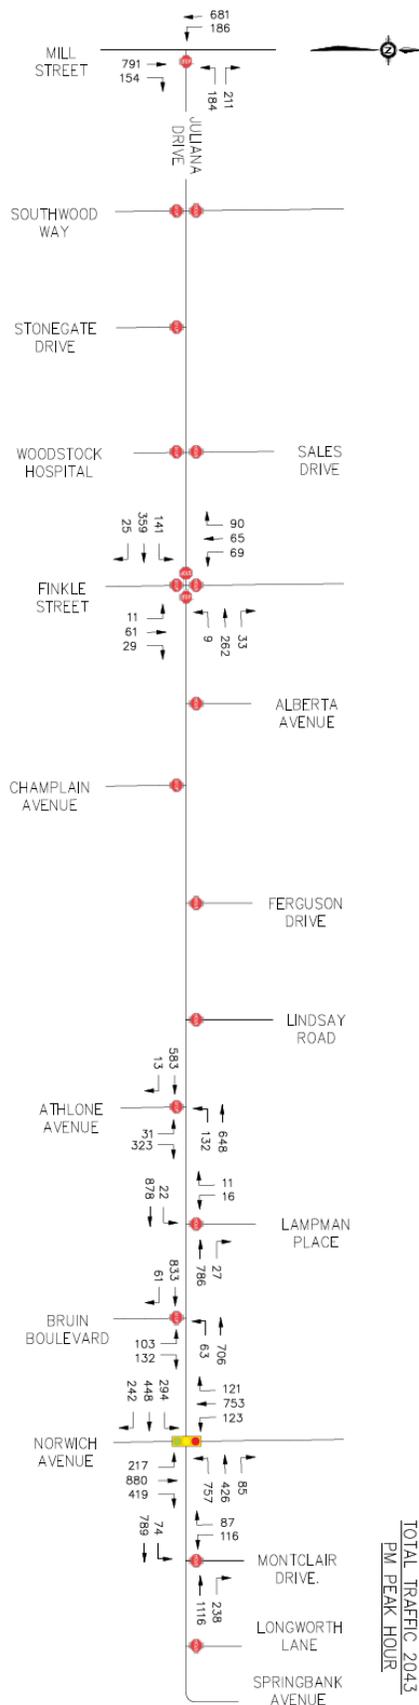

Figure 5: Total Traffic 2043 (Weekday AM / PM Peak)

## 6.1 Mill Street at Juliana Drive

The existing tee intersection of Mill Street at Juliana Drive is under the jurisdiction of Oxford County and is controlled by a westbound stop condition, with a dedicated right turn lane and a through lane on the northbound approach, as well as a dedicated left turn lane and a through lane on the southbound approach; the westbound approach has dedicated left and right turn lanes. As observed in **Table 1**, under existing traffic volumes, all approaches operate at a satisfactory level of service. The minor street approach lane is expected to operate at a LOS D with a queue of up to 3.3 vehicles in the PM peak hour. By the 2043 horizon year, under current geometric / traffic control conditions, the westbound approach deteriorates to a LOS F, with a potential 95<sup>th</sup> percentile queue of up to 23 vehicles during the PM peak hour.

| Table 1: Level of Service by Approach – Mill Street at Juliana Drive |              |     |     |     |              |     |     |     |
|--|--------------|-----|-----|-----|--------------|-----|-----|-----|
| Scenario   | AM Peak Hour |     |     |     | PM Peak Hour |     |     |     |
|  | E/B          | W/B | N/B | S/B | E/B          | W/B | N/B | S/B |
| Existing Traffic   | -            | C   | A   | A   | -            | D   | A   | A   |
| Total Traffic 2043   | -            | F   | A   | A   | -            | F   | A   | A   |

## 6.2 Finkle Street at Juliana Drive

The existing intersection of Finkle Street at Juliana Drive is controlled by an all-way stop condition, with shared lanes on all approaches. As observed in **Table 2**, under existing traffic volumes, all approaches operate at a good level of service. By the 2043 horizon PM peak hour scenario, due to increased traffic volumes, the eastbound approach slips to LOS E, with a queue of up to 12 vehicles.

| Table 2: Level of Service by Approach – Finkle Street at Juliana Drive |              |     |     |     |              |     |     |     |
|--|--------------|-----|-----|-----|--------------|-----|-----|-----|
| Scenario   | AM Peak Hour |     |     |     | PM Peak Hour |     |     |     |

### 6.3 Athlone Avenue at Juliana Drive

The existing tee intersection of Athlone Avenue at Juliana Drive is controlled by a northbound stop condition, with a shared lane on the eastbound approach, a left turn lane and a through lane on the westbound approach, and a left turn lane and channelized right turn lane (with an acceleration lane) on the northbound approach. As observed in **Table 3**, under existing traffic volumes, all approaches operate at a good level of service. By the 2043 horizon PM peak hour scenario, due to increased traffic volumes and fewer gaps on Juliana Drive, the northbound left turn approach slips to LOS E with a potential queue of up to 7 vehicles.

| Table 3: Level of Service by Approach – Athlone Avenue at Juliana Drive |              |     |     |     |              |     |     |     |

### 6.4 Lampman Place at Juliana Drive

The existing tee intersection of Lampman Place at Juliana Drive is controlled by a southbound stop condition, with shared lanes on the eastbound and westbound approaches, and dedicated left and right turn lanes on the southbound approach. As observed in **Table 4**, under existing traffic volumes, all approaches operate at a satisfactory level of service. By the 2043 horizon PM peak hour scenario, the southbound approach slips to LOS E; however, the queue is expected to be less than one vehicle.

| Table 4: Level of Service by Approach – Lampman Place at Juliana Drive |              |     |     |     |              |     |     |     |

## 6.5 Bruin Boulevard at Juliana Drive

The existing tee intersection of Bruin Boulevard at Juliana Drive is controlled by a northbound stop condition, with shared lanes on the eastbound and northbound approaches, and a dedicated left turn lane and a through lane on the westbound approach. As observed in **Table 5**, under existing traffic volumes, all approaches operate at a satisfactory level of service. By the 2043 horizon PM peak hour scenario, due to increased traffic volumes, the northbound approach slips to LOS F (with a potential queue of up to 21 vehicles and a substantial control delay).

| Table 5: Level of Service by Approach – Bruin Boulevard at Juliana Drive |              |     |     |     |              |     |     |     |

| Total Traffic 2043   | A            | A   | F   | -   | A            | A   | F   | -   |

## 6.6 Norwich Avenue at Juliana Drive

The Oxford County intersection of Norwich Avenue at Juliana Drive is signalized. The eastbound leg consists of dedicated left, through, and right turn lanes; the westbound leg consists of a dedicated double left turn lane and a shared through / right turn lane. The northbound leg consists of a dedicated left turn lane, a through lane, and a shared through / right turn lane; the southbound leg consists of a dedicated left turn lane, a through lane and a shared through / right turn lane. As reported in **Tables 6 and 7**, the intersection of Norwich Avenue at Juliana Drive is currently operating at a satisfactory level of service. By the 2043 horizon PM peak hour scenario, due to increased traffic volumes, the overall intersection level of service slips to LOS F (with substantial queue lengths on all approaches). If left unmanaged, the 95<sup>th</sup> percentile queue length for the eastbound through movement is projected to reach 235m, which would extend past the intersections of Bruin Boulevard and Lampman Place.

**Table 6: Overall Signalized Level of Service by Approach – Norwich Avenue at Juliana Drive**

| Scenario           | AM Peak Hour | PM Peak Hour |
|--------------------|--------------|--------------|
| Existing Traffic   | C            | D            |
| Total Traffic 2043 | E            | F            |

**Table 7: Level of Service by Approach – Norwich Avenue at Juliana Drive**

| Scenario           | AM Peak Hour |     |     |     | PM Peak Hour |     |     |     |

| Existing Traffic   | D            | D   | B   | C   | E            | D   | C   | C   |
| Total Traffic 2043 | F            | E   | D   | C   | F            | F   | F   | E   |

## 6.7 Montclair Drive at Juliana Drive

The existing tee intersection of Montclair Drive at Juliana Drive is controlled by a southbound stop condition; a dedicated eastbound left turn lane was recently implemented. As observed in **Table 8**, under existing traffic volumes, all approaches operate at a satisfactory level of service, except for the southbound approach (which exhibits a LOS E in the PM peak hour, a control delay of up to 39 seconds, and a queue of up to 3 vehicles). These metrics worsen to LOS F in the 2043 horizon scenarios. Consideration was given to the implementation of (dedicated) southbound left and right turn lanes; however, the use of adjacent dedicated turning lanes is generally discouraged due to potential sightline conflicts that are created by adjacently queued vehicles. Side-by-side vehicles can block visibility for good decision-making, which can introduce a safety issue that adversely impacts traffic operations. The trade-off between traffic safety and traffic operations is non-ideal; therefore, best practices suggest that this “geometric improvement” should not be implemented without due consideration. From the TAC Geometric Design Guide for Canadian Roads (2017), page 136, “It is undesirable to have a two-lane entry from the minor roadway to the major roadway with stop control, except at certain low-speed urban locations.”

| Table 8: Level of Service by Approach – Montclair Drive at Juliana Drive |              |     |     |     |              |     |     |     |

| Total Traffic 2043   | A            | A   | -   | F   | A            | A   | -   | F   |

## 7.0 Signal Warrant Analysis

Signal warrants were completed at six intersections within the study area, namely:

- Mill Street (CR12) at Juliana Drive;
- Finkle Street at Juliana Drive;
- Athlone Avenue at Juliana Drive;
- Lampman Place at Juliana Drive;
- Bruin Boulevard at Juliana Drive;
- Montclair Drive at Juliana Drive.

The detailed signal warrant analysis results are presented in **Appendix D**. None of the intersections meet the provincial warrants for signalization (under existing or 20-year horizon traffic conditions).

## 8.0 Left Turn Lane Warrants

Eastbound and / or westbound left turn lanes currently exist at Juliana Drive’s intersections with Mill Street, Athlone Avenue, Bruin Boulevard, Norwich Avenue, and Montclair Drive. Finkle Street and Lampman Place are without eastbound and / or westbound left turn lanes along Juliana Drive, so left turn lane warrants were examined at these intersections (for existing and horizon scenarios). The provincial warrant references are provided in **Appendix E**. The speed limit on Juliana Drive is 50 km/h; therefore, the design speed of 60 km/h was chosen to evaluate each scenario. For the eastbound approach to the intersection of Finkle Street at Juliana Drive, based on the estimated turning movements in each scenario, eastbound left turns in all scenarios are expected to be between 26.8% and 27.8% of the eastbound approach volume; therefore, the evaluation referenced the guidelines for 25% left turns.

Although the on-street traffic volumes fall below the MTO minimum requirement for implementation of a left turn lane in the existing traffic scenarios, the future on-street volumes (along with the percentage of anticipated left turns in the future scenarios) do warrant a dedicated eastbound left turn lane with a storage length of 15m (plus taper).

Furthermore, based on the estimated turning movements in each scenario, westbound left turns are expected to be approximately 3.0% of the westbound approach volume in the AM peak hour and 20.4% of the westbound approach volume in the PM peak hour; therefore, the evaluation referenced the guidelines for 20% left turns. The projected volumes of left turns do not warrant a dedicated westbound left turn lane during the PM peak hour since they fall below the MTO's 5% left turn volume minimum requirement; however, the projected future on-street traffic volumes during the PM peak hour come close to the requirement for a 15m westbound left turn lane (plus taper) to be warranted to accommodate the 2043 traffic volumes. Since an eastbound left turn lane is required, it would be prudent to implement a dedicated left turn lane on both approaches.

At the intersection of Lampman Place at Juliana Drive, based on the estimated turning movements in each scenario, eastbound left turns in all scenarios are expected to be less than 2.5% of the eastbound approach volume; therefore, the evaluation referenced the guidelines for 5% left turns. However, the projected volumes of left turns do not warrant a dedicated eastbound left turn lane because they fall below the MTO's 5% requirement for implementation of a left turn lane. Since the horizon on-street traffic volumes meet the MTO minimum requirements, it would be prudent to consider implementation of an eastbound left turn lane with a minimum of 25m storage (plus taper) to accommodate both the minimal eastbound left turns and the creation of gaps for southbound left turns from Lampman Place.

In summary, by horizon year 2043, Juliana Drive left turn lanes should be implemented as follows:

- Finkle Street at Juliana Drive (eastbound) – 15m;
- Finkle Street at Juliana Drive (westbound) – 15m.

Though the percentage of left turns in the advancing volumes fall below the MTO's required 5% minimum threshold in many of the scenarios, the on-street traffic volumes are expected to increase with the addition of area development traffic and background traffic growth. If this is the case, minor street left turning vehicles will experience increasingly fewer gaps, resulting in longer queues. The nine other intersections within the study area (not chosen for evaluation) should not require dedicated eastbound / westbound left turn lanes; however, with the expected increase in on-street traffic volumes, vehicles attempting to exit or enter the traffic stream at these locations will also experience very fewer gaps (which will result in longer queues developing on the side streets).

## 9.0 Oxford County Transportation Master Plan

Oxford County has recently updated its Transportation Master Plan. Within the plan are projects earmarked for improvements over the next 1 to 5 years (2024 – 2028), 6 to 10 years (2029 – 2033) and 11+ years (2034+). The following project may influence the Juliana Drive Corridor in Woodstock:

- Oxford Road 12 (Mill Street) at Juliana Drive is scheduled for intersection improvements within the 6-to-10-year range (INT.13); roundabout control is recommended for this location.

## 10.0 Geometric and Traffic Control Improvements

Based on the anticipated area development traffic volumes (and in consideration of the undertaken geometric and traffic control analyses), it is the engineers' opinion that the road authority should consider some geometric and traffic control improvements to mitigate the anticipated increase to traffic volumes utilizing Juliana Drive. Generally, a three-lane cross-section (one lane in each direction with two-way left turn lane) is sufficient for roadways with an average annual daily traffic (AADT) that falls below 20,000 vehicles per day; the application is dependent on roadway volumes and other operational factors. Key criteria include:

- *Annual Average Daily Traffic (AADT) is less than 20,000 motor vehicles per day;*
- *Peak Hour / Direction Traffic is at or below 750 motor vehicles / hour;*
- *Turning Volumes and Patterns;*
- *Impacts to Transit;*
- *Impacts to Goods Movement.*

From the turning movement counts, the existing traffic volumes are just below the upper threshold. Therefore, a continuous three-lane cross-section was explored as a potential short-term improvement to the corridor. The existing and proposed typical cross-sections are depicted on **Figure 6**.

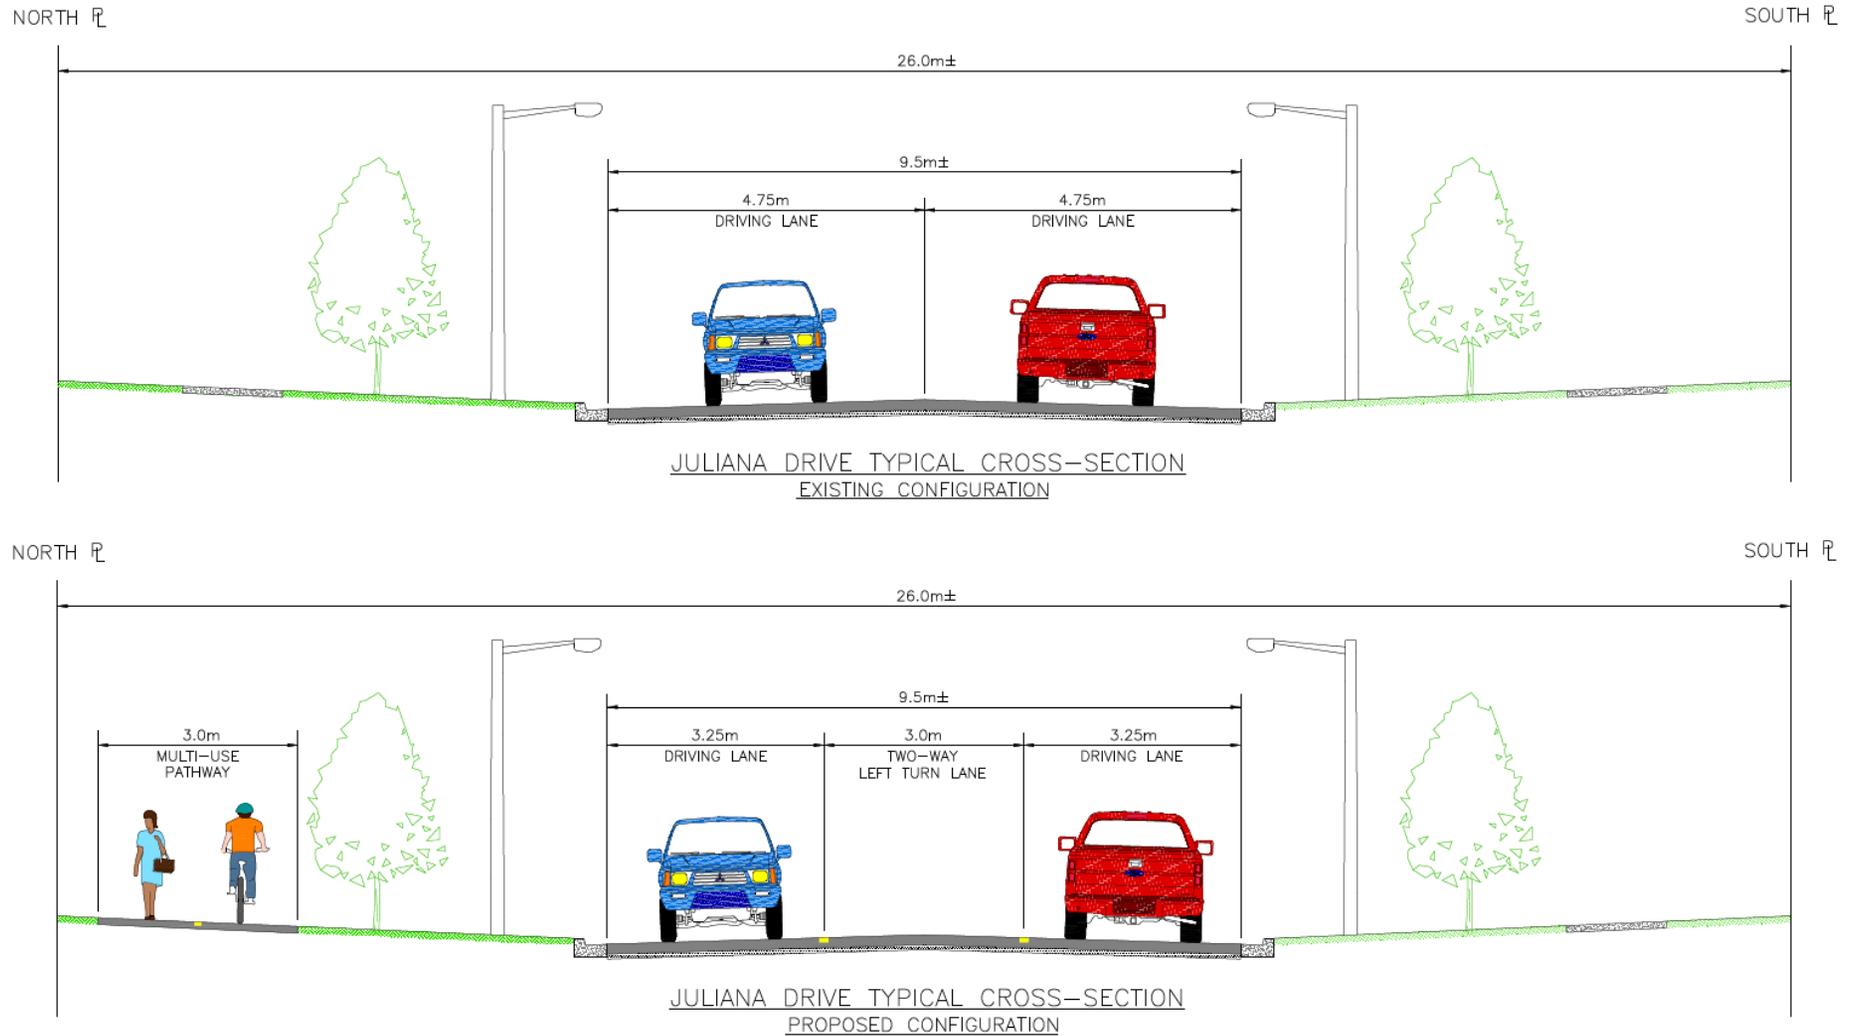

Figure 6: Typical Juliana Drive Cross-Sections

By the 2043 horizon year, eastbound and westbound left turn lanes are warranted at Finkle Street, in addition to the current left turn lanes at Mill Street, Athlone Avenue, Bruin Boulevard, Norwich Avenue, and Montclair Drive; therefore, it is the engineers' opinion that a two-way left turn lane could be implemented along the entire length of Juliana Drive, from Mill Street at the west to Springbank Avenue at the east. Since Juliana Drive is approximately 9.5m in width through this section of roadway, it is the engineers' opinion that the proposed reconfiguration could be accomplished through simple line painting and signage / by-law amendments. However, it must be noted that the City has done a good job of access management throughout the corridor, so a two-way-left-turn-lane treatment is of no benefit for a few stretches of roadway; therefore, the City is encouraged to review each road segment along Juliana Drive prior to implementing unidirectional (dedicated) or two-way left turn lanes. Signage and bylaws should supplement and regulate the applied line painting; a Professional Traffic Operations Engineer should be engaged to prepare a painting / signage plan that complies with best practices (as outlined in the Ontario Traffic Manual).

Additional Synchro 11 reports, found in **Appendix F**, were generated to evaluate the potential benefit of implementing the recommended traffic control and geometric improvements. **Table 9** identifies the levels of service that can be expected in the 2043 horizon peak hours. The failing results (denoted with a star\*) indicate that the average control delay at these intersections will exceed 50 seconds during the respective peak hours.

As previously indicated, the volumes do not meet the provincial justifications for traffic signal implementation, so traffic signal control is not recommended within the study area; however, the road authority is not beholden to the provincial signal warrants. At its discretion, the respective road authority may consider other factors (delay, safety, active transportation connectivity, etc.) to justify its implementation of higher-order traffic control devices.

**Table 9: Level of Service by Approach – Total Traffic 2043 Peak Hours (Proposed Imp.)**

| Scenario                         | AM Peak Hour |     |     |     |
|----------------------------------|--------------|-----|-----|-----|
|                                  | E/B          | W/B | N/B | S/B |
| Mill Street at Juliana Drive     | -            | F*  | A   | A   |
| Finkle Street at Juliana Drive   | C            | B   | B   | B   |
| Athlone Avenue at Juliana Drive  | A            | A   | C   | -   |
| Lampman Place at Juliana Drive   | A            | A   | -   | C   |
| Bruin Boulevard at Juliana Drive | A            | A   | D   | -   |
| Norwich Avenue at Juliana Drive  | F*           | E   | D   | C   |
| Montclair Drive at Juliana Drive | A            | A   | -   | D   |
| Scenario                         | PM Peak Hour |     |     |     |
|                                  | E/B          | W/B | N/B | S/B |
| Mill Street at Juliana Drive     | -            | F*  | A   | A   |
| Finkle Street at Juliana Drive   | C            | C   | B   | B   |
| Athlone Avenue at Juliana Drive  | A            | A   | D   | -   |
| Lampman Place at Juliana Drive   | A            | A   | -   | C   |
| Bruin Boulevard at Juliana Drive | A            | A   | F*  | -   |
| Norwich Avenue at Juliana Drive  | F*           | F*  | F*  | D   |
| Montclair Drive at Juliana Drive | A            | A   | -   | F*  |

Of note, the collected turning movement counts indicate that 58 pedestrians crossed Juliana Drive (north / south) at Finkle Street during the peak eight hours; 47 pedestrians crossed at Lampman Place, and 15 pedestrians crossed at Bruin Boulevard. Since Finkle Street is already controlled by an all-way stop, unless the public expresses concern regarding safety of passage, there is no justification for signal control at this intersection. However, at the intersection of Lampman Place at Juliana Drive, even though the existing tee intersection will never meet the provincial warrants for signalization, it is the engineers' opinion that a higher-order form of traffic control could be implemented to provide safe pedestrian passage across Juliana Drive; since the intersection is about 220m away from the existing signalized intersection of Norwich Avenue at Juliana Drive, best practices suggest that this intersection is a better candidate for implementation of a pedestrian crossing treatment than Bruin Boulevard, which is only 120m away from the nearest controlled crossing.

As opportunities arise for redevelopment of the golf clubhouse located opposite Lampman Place, it is the engineers' opinion that Bruin Boulevard should be reconfigured to align opposite Lampman Place; signalization could then be implemented and coordinated with the existing signalized intersection of Norwich Avenue at Juliana Drive. However, in the interim, it is the engineers' opinion that a pedestrian crossover (PXO) is an appropriate treatment for facilitating safe pedestrian passage across Juliana Drive (within this segment of roadway); a "Level 2, Type B" PXO will likely suffice in accommodating pedestrian traffic within the 20-year horizon, but a Professional Traffic Operations Engineer should be engaged to prepare a supplementary report and detailed pedestrian crossing treatment design (in accordance with current best practices, as outlined in the Ontario Traffic Manual – Book 15).

## 11.0 Active Transportation Considerations

In addition to the potential pedestrian crossing treatments, active transportation facilities were also explored for the subject Juliana Drive corridor. From Mill Street to the existing Walmart® site access on Juliana Drive, sidewalks are currently provided on both sides of the Juliana Drive corridor, except for a "missing link" on the south side of the roadway (from the westerly St. Mary's Catholic High School site access to Lampman Place); from the Walmart easterly (about 840m), no sidewalk is provided on either side of Juliana Drive. The City of Woodstock should bridge the "missing links" in their sidewalk network by continuing to build out sidewalks on both sides of Juliana Drive (or by providing pedestrian crossing treatments at junctions where pedestrians are expected to cross).

Cycling facilities are currently non-existent within the Juliana Drive corridor. However, it is observed that the Juliana Drive right-of-way is large enough to accommodate an in-boulevard multi-use pathway. A few conflicting infrastructure elements may make the implementation challenging in some locations, but most of the corridor provides large and unoccupied boulevards for implementation of a 3.0m-wide in-boulevard multi-use pathway.

## 12.0 Summary and Conclusions

Upon review of the Juliana Drive corridor, it is concluded that:

- The City has successfully managed access throughout the corridor, so a two-way-left-turn-lane is of no benefit for a few stretches of roadway; the City should review each road segment along Juliana Drive prior to implementing unidirectional (dedicated) or two-way left turn lanes;
- Signage and bylaws should supplement and regulate the respective line painting treatments; a Professional Traffic Operations Engineer should be engaged to prepare a painting / signage plan that complies with current best practices;
- Apart from the existing signalized intersection of Norwich Avenue at Juliana Drive, no Juliana Drive intersections meet the provincial warrants for signalization (within a 20-year horizon); however, at its discretion, the road authority may consider other factors (delay, safety, active transportation connectivity, etc.) in justifying higher-order traffic control devices;
- By Horizon Year 2043, the intersection of Finkle Street at Juliana Drive could be improved via implementation of dedicated eastbound and westbound left turn lanes; the eastbound left turn storage lane should be at least 25m long (with taper), and the westbound left turn storage lane should be at least 15m long (with taper);
- On-street traffic volumes are expected to increase with the addition of area development traffic and background traffic growth; as the corridor becomes built out, minor street left turning vehicles will experience increasingly fewer gaps, resulting in longer queues;
- From the Oxford County Transportation Master Plan, Oxford County is expected to reconstruct the intersection of Oxford Road 12 (Mill Street) within a 6-to-10-year horizon; roundabout control is recommended for this location, and it is expected to significantly improve the levels of service experienced during the critical peak hours;
- At the intersection of Lampman Place at Juliana Drive, a higher-order form of traffic control could be implemented to provide safe pedestrian passage across Juliana Drive; since it is about 220m away from the existing signalized intersection of Norwich Avenue at Juliana Drive, this intersection is a better candidate for implementation of a pedestrian crossing treatment than Bruin Boulevard, which is only 120m away from the nearest controlled crossing;
- As opportunities arise for redevelopment of the lands opposite Lampman Place, Bruin Boulevard could be reconfigured to align directly opposite; signalization could then be implemented and coordinated with the existing signalized control at Norwich Avenue;

- At Lampman Place, in the interim, a pedestrian crossover (PXO) could be considered an appropriate treatment for facilitating safe pedestrian passage across Juliana Drive;
- Missing links in the sidewalk network should be bridged via continuous buildout of sidewalks on both sides of Juliana Drive (or by providing pedestrian crossing treatments at junctions where pedestrians are expected to cross);
- Cycling facilities are currently non-existent within the Juliana Drive corridor, but the Juliana Drive right-of-way is large enough to accommodate an in-boulevard multi-use pathway; a few conflicting infrastructure elements may make the implementation challenging in some locations, but most of the corridor provides large and unoccupied boulevards for implementation of a 3.0m-wide in-boulevard multi-use pathway.

Intersection Summary

Area Type: Other  
 Cycle Length: 122  
 Actuated Cycle Length: 122  
 Offset: 94.5 (77%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow  
 Natural Cycle: 120  
 Control Type: Actuated-Coordinated  
 Maximum v/c Ratio: 1.13  
 Intersection Signal Delay: 57.3 Intersection LOS: E  
 Intersection Capacity Utilization 98.5% ICU Level of Service F  
 Analysis Period (min) 15  
 ~ Volume exceeds capacity, queue is theoretically infinite.  
 Queue shown is maximum after two cycles.  
 # 95th percentile volume exceeds capacity, queue may be longer.  
 Queue shown is maximum after two cycles.

Splits and Phases: 22: NORWICH AVE. /NORWICH AVE. & JULIANA DR.

| 5. COLLISION EXPERIENCE          | A. Total Reported Accidents of Types Susceptible to Correction by a Traffic Signal, per 12 Month Period Averaged over a 36 Month Period, and               | 5  |  | N/A               | N/A        |
|                                  | B. Adequate Trial of Less Restrictive Remedies. Where Satisfactory Observance and Enforcement Have Failed to Reduce the Number of Collisions               | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                   |            |
| 6. PEDESTRIAN VOLUME AND DELAY   | A. Plotted Point Representing 8 Hour Pedestrian Volume vs. 8 Hour Vehicular Volume Fall in Justified Zone, and   | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                   | N/A        |
|                                  | B. Plotted Point Representing 8 Hour Volume of Pedestrian Experiencing Delays of 10 s or more vs. 8 Hour Pedestrian Volume Fall in Justified Zone          | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                   |            |

**Notes**

- \* Vehicle Volume Warrants 1A and 2A for Roadways Having Two or More Moving Lanes in One Direction Should be 25% Higher than Values Given Above.
- \*\* The Lowest Sectional Percentage Governs the Entire Warrant.
- \*\*\* For "T" Intersections, the Values for Warrant (1B) should be increased by 50%.

**Justification 7 - Future Traffic Volumes**

(1) =  $(1005 + 1154) / 4 / 720 = 75\%$

(2) =  $(302 + 325) / 4 / 170 = 92\%$

(3) =  $(703 + 829) / 4 / 720 = 53\%$

(4) =  $(128 + 145) / 4 / 75 = 91\%$

| 6. PEDESTRIAN VOLUME AND DELAY   | A. Plotted Point Representing 8 Hour Pedestrian Volume vs. 8 Hour Vehicular Volume Fall in Justified Zone, and   | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    | N/A        |
|                                  | B. Plotted Point Representing 8 Hour Volume of Pedestrian Experiencing Delays of 10 s or more vs. 8 Hour Pedestrian Volume Fall in Justified Zone          | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    |            |

**Notes**

- \* Vehicle Volume Warrants 1A and 2A for Roadways Having Two or More Moving Lanes in One Direction Should be 25% Higher than Values Given Above.
- \*\* The Lowest Sectional Percentage Governs the Entire Warrant.
- \*\*\* For "T" Intersections, the Values for Warrant (1B) should be increased by 50%.

**Justification 7 - Future Traffic Volumes**

- (1) =  $(1419 + 1898) / 4 / 720 = 115\%$
- (2) =  $(199 + 235) / 4 / (170 \times 1.5) = 43\%$
- (3) =  $(1220 + 1663) / 4 / 720 = 100\%$
- (4) =  $(101 + 103) / 4 / 75 = 68\%$

**Traffic Signal Warrants – Summary of Justifications (OTM Book 12)**

**Projected Background Traffic (Horizon Year 2043)**

Montclair Drive at Juliana Drive

| JUSTIFICATION                    | DESCRIPTION  | MINIMUM REQUIREMENTS FOR TWO-LANE ROADWAYS       |  | COMPLIANCE         |            |
|----------------------------------|--|--|--|--------------------|------------|
|                                  |  | FREE FLOW  | RESTRICTED FLOW                        | SECTIONAL %        | ENTIRE %** |
|                                  |  | OPERATING SPEED GREATER THAN OR EQUAL TO 70 km/h | OPERATING SPEED LESS THAN 70 km/h      |                    |            |
| 1. MINIMUM VEHICULAR VOLUME      | A*. Vehicle Volume, All Approaches for Each of the Heaviest 8 Hours of an Average Day, and   | 480  | 720                                    | 139 <sup>(1)</sup> | 31         |
|                                  | B***. Vehicle Volume, Along Minor Streets for Each of the Same 8 Hours   | 120  | 170                                    | 31 <sup>(2)</sup>  |            |
| 2. DELAY TO CROSS TRAFFIC        | A*. Vehicle Volume, Major Street for Each of the Heaviest 8 Hours of an Average Day, and   | 480  | 720                                    | 128 <sup>(3)</sup> | 55         |
|                                  | B*. Combined Vehicle and Pedestrian Volume Crossing the Major Street for Each of the Same 8 Hours.   | 50   | 75                                     | 55 <sup>(4)</sup>  |            |
| 3. VOLUME/DELAY COMBINATIONS     | The Above Justifications (1 and 2) Both Satisfied to the Extent of 80% or more   | YES <input type="checkbox"/>                     | NO <input checked="" type="checkbox"/> |                    | 31         |
| 4. MIN. FOUR HOUR VEHICLE VOLUME | At Plotted Point Representing Hourly Volume for Minor Approach vs. Major Approach for Four Highest Hours of an Average Day Fall above the Applicable Curve | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    | N/A        |
| 5. COLLISION EXPERIENCE          | A. Total Reported Accidents of Types Susceptible to Correction by a Traffic Signal, per 12 Month Period Averaged over a 36 Month Period, and               | 5  |  | N/A                | N/A        |
|                                  | B. Adequate Trial of Less Restrictive Remedies. Where Satisfactory Observance and Enforcement Have Failed to Reduce the Number of Collisions               | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    |            |
| 6. PEDESTRIAN VOLUME AND DELAY   | A. Plotted Point Representing 8 Hour Pedestrian Volume vs. 8 Hour Vehicular Volume Fall in Justified Zone, and   | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    | N/A        |
|                                  | B. Plotted Point Representing 8 Hour Volume of Pedestrian Experiencing Delays of 10 s or more vs. 8 Hour Pedestrian Volume Fall in Justified Zone          | YES <input type="checkbox"/>                     | NO <input type="checkbox"/>            |                    |            |

**Notes**

- \* Vehicle Volume Warrants 1A and 2A for Roadways Having Two or More Moving Lanes in One Direction Should be 25% Higher than Values Given Above.
- \*\* The Lowest Sectional Percentage Governs the Entire Warrant.
- \*\*\* For "T" Intersections, the Values for Warrant (1B) should be increased by 50%.

**Justification 7 - Future Traffic Volumes**

(1) =  $(1574 + 2420) / 4 / 720 = 139\%$

(2) =  $(114 + 203) / 4 / (170 \times 1.5) = 31\%$

(3) =  $(1460 + 2217) / 4 / 720 = 128\%$

(4) =  $(49 + 116) / 4 / 75 = 55\%$
